 Subject: DuSable Park - Radiological Screening Results

Good Afternoon:

I just spoke with Verneta and per her suggestion I am forwarding this email.

Yesterday, at the DuSable Park STS discovered a small area (9 X 12 ft) which exhibited maximum gamma readings in the range of 40,000 cpm and 76,000 cpm. Unfortunately, this area is located in a ramp construction area and we would like to move forward quickly with its remediation (i.e., potentially early next week). As such, I thought that it would be appropriate that we have a discussion (phone call) regarding the discovery and the proposed remedial activities. I realize that Verneta is in the field today and tomorrow, but from my conversation with her earlier today, she thought that she would be available around noon.

Please let me know if it is possible to schedule a call for tomorrow, but in the meantime feel free to contact me if you have any questions.

Sincerely,

Steve Kornder
